

## Schedule document

To kick off this semester project, and with it this schedule document, I thought I would start by making an analysis of the assignment. I went through all the provided content and made notes. From there I was able to write a list of all the upcoming tasks and make a network diagram. I concluded there was a natural flow to the path of the critical tasks, and really without any particular floating tasks to consider.

I based the timeline on the recommended process from the project description and worked from that, filling in the gaps as suitable. The timeframe for these remaining tasks I was able to decide on the basis of previous assignments, from which I added some margin of error as this is quite a large project, making it natural to spend more time on each task.

I once again chose to base the design of my Gantt chart off of a free template provided by TeamGantt. As stated in reports from previous assignments, I favor it due to its simplicity and how easy it is to alter.

## Activities

Finishing this project I plan to have completed this full list of activities:

- Project planning
  - Setting up work environment
  - Analysis
  - Gantt chart
  - Schedule document
- Research
  - Competition
  - Colors
  - General inspiration
- Sitemap
- Wireframing and sketches
- Submitting schedule document

- Style tile
  - Typography
  - Color palette
  - Logo
  - Icons
  - Buttons
- Deciding on possible extra illustrations
- Mockup
- Writing HTML
- Writing CSS
- Testing
  - Cross-platform – computer, tablet, smartphone
  - Cross-browser – Chrome, Firefox, Safari, Internet Explorer
- Bug fixing
- Validating
- Final refinements
- Writing report
- Submitting website and report
